INDEPENDENT DATA MONITORING COMMITTEE

Charter and Meeting Record — Study KLV-7703

Kelvaparib (KLV-3308)

Marnholt Oncology GmbH

Indication: High-grade serous ovarian carcinoma

1. PURPOSE

The independent data monitoring committee safeguards the interests of subjects enrolled in study KLV-7703 by reviewing accumulating safety data and, where the protocol provides for it, the interim efficacy analysis. The committee is independent of the sponsor and of the investigators.

2. COMPOSITION

The committee comprises three voting members: two clinicians experienced in the management of high-grade serous ovarian carcinoma and one statistician independent of the trial. Members are identified to the sponsor by role only; names are held by the committee secretariat and are not recorded in the trial master file.

3. MEETINGS AND QUORUM

The committee meets before the first subject is enrolled, thereafter at intervals of six months, and additionally at the request of any member. A quorum requires all three voting members. The sponsor attends the open session only.

4. STOPPING GUIDANCE

- An excess of deaths within 30 days of the first dose in any treatment group.
- An incidence of grade 3 or higher myelosuppression materially above that observed in the dose-finding studies.
- Any single event that in the committee's judgement calls the acceptability of the risk into question.

5. RECORD OF MEETINGS

Table 1 Meetings and Data Reviewed

Meeting	Data cut	Subjects dosed	Grade 3 or higher event	Serious event	Deaths	Recommendation
Six-monthly review 1	24 October 2020	67	29	12	4	Continue unchanged
Six-monthly review 2	24 April 2021	142	61	21	6	Continue unchanged
Six-monthly review 3	24 October 2021	218	99	43	14	Continue unchanged
Interim analysis (110 of 219 planned PFS events)	2 February 2022	275	123	57	24	Continue unchanged
Six-monthly review 4	24 April 2022	304	142	66	37	Continue unchanged
Six-monthly review 5	24 October 2022	352	172	81	62	Continue unchanged

At each meeting the committee reviewed the data in Table 1 in closed session; the counts are of subjects, as at the data cut of the meeting. No stopping criterion was met at any meeting. At the interim meeting the committee also reviewed the non-binding futility analysis of progression-free survival that the statistical analysis plan specifies, with 110 events in the full analysis set at the data cut of 2 February 2022. At every meeting it recommended that the study continue without modification.

1 PURPOSE AND AUTHORITY

The committee advises the sponsor on whether the accumulating data justify continuing the study as designed. It is advisory; the decision rests with the sponsor. Its remit, and the circumstances in which it may recommend modification or termination, are fixed in the charter before the first subject is enrolled.

2 MEMBERSHIP AND INDEPENDENCE

The committee comprises clinicians experienced in the disease under study and a statistician, none of whom is an investigator in the study, has a financial interest in the product, or otherwise has an interest that would compromise independence. Members declare interests before appointment and whenever an interest arises.

3 MEETING SCHEDULE

The committee meets before the first review to agree its working practices, at the intervals set in the charter, after any prespecified interim analysis, and at any time at the request of its chair or the sponsor.

4 DATA PROVIDED TO THE COMMITTEE

The committee receives disposition, exposure, adverse events by system organ class and preferred term, serious events, deaths, laboratory data and, where the charter provides for it, unblinded efficacy data. The statistician preparing the data reports to the committee and not to the study team.

5 OPEN AND CLOSED SESSIONS

Each meeting has an open session, attended by the sponsor, at which conduct and data quality are discussed, and a closed session at which the committee alone reviews the data by treatment group. Minutes of the closed session are held by the committee and released to the sponsor only at the end of the study.

6 RECOMMENDATIONS AVAILABLE TO THE COMMITTEE

The committee may recommend that the study continue unchanged, that it continue with modification, that enrolment be paused pending further information, or that the study be terminated. The basis of any recommendation is recorded.

7 COMMUNICATION OF RECOMMENDATIONS

The chair communicates the recommendation to the nominated sponsor representative in writing. The recommendation is not communicated to investigators or to the study team in a form that would convey unblinded information.

8 CONFIDENTIALITY

Members are bound to confidentiality in respect of everything they see. Nothing seen by the committee is disclosed to the study team, to investigators or to subjects except through a recommendation communicated as described above.

9 RECORDS

The charter, the membership, the declarations of interest, the agenda and the open session minutes are filed in the trial master file. Closed session minutes are held separately until the end of the study.
